# DOCK

## RED STITCH

## DOCK

As work spaces are increasingly set up for flexibility, its furniture requires more adaptability than ever before.

Dock offers the possibility to charge smartphones and other mobile devices through its subtly hidden powerframes behind its zipped flaps.

Its proportions give sufficient elbow room when working or moving your arms to shift one's position, making notes or talk to the person next to you.

The Dock can be connected to a ground socket or with a power wire through one of the metal ducts around the sofa.

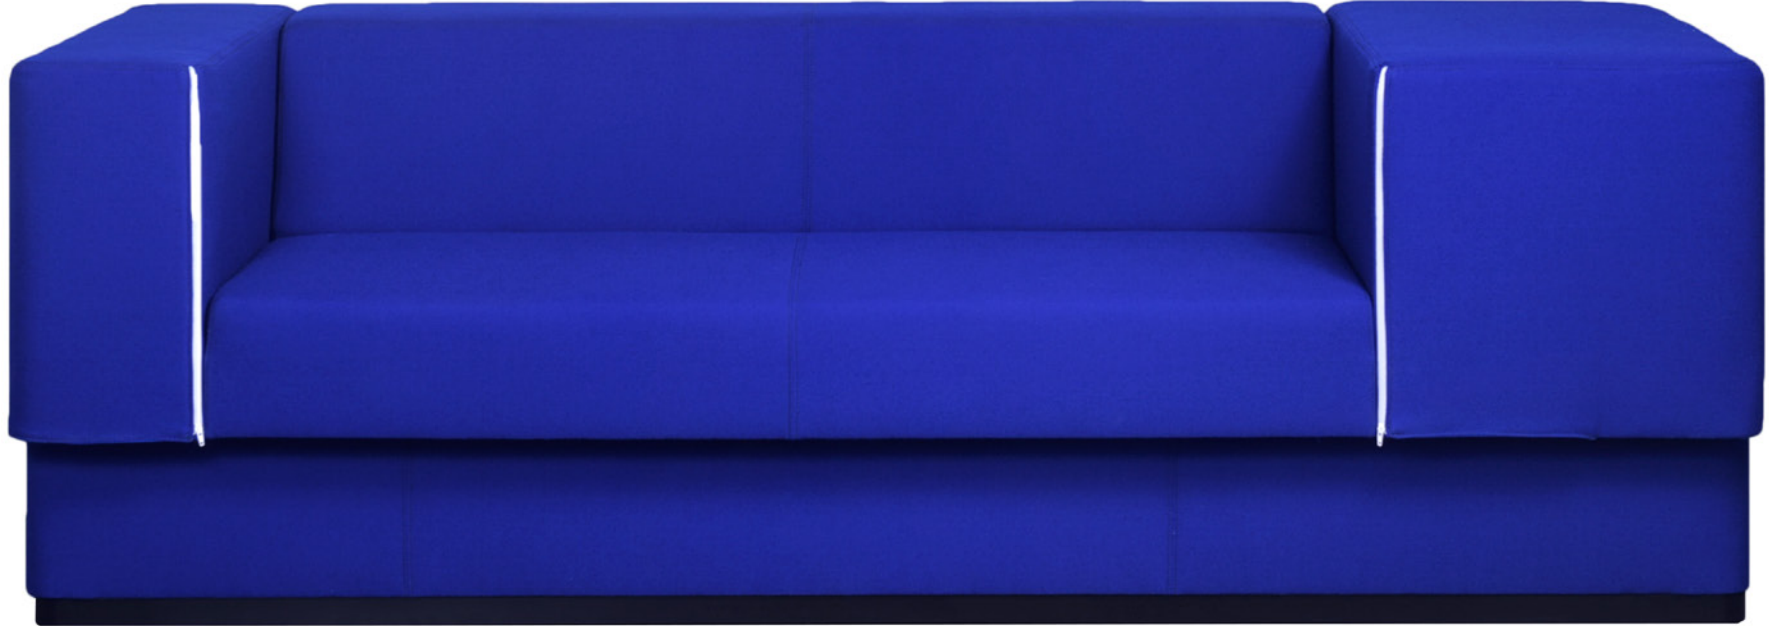

The design is fully customizable. See second last page for more information on Dock its different configurations.

REDSTITCH

The design is fully customizable. Because the armrests come in two sizes that gives you the freedom to compose your own sofa fitting to the clients conditions.

Its proportions give sufficient elbow room when working or moving your arms to shift one's position, making notes or talk to the person next to you.

#### DOCK CONFIGURATIONS

Armchairs, sofa's, chaise longues, with or without acoustic screen and face-to-face cabins can be customized to fit a specific need or give the (interior-) architect the freedom to create a diverse landscape of volumes.
