Woods

Mobile Planters

orangebox

Product Description

The idea that the workplace could become a place that energises the workforce, to the extent that when you leave at the end of the workday you could be more replenished than when you arrived, has been widely proposed in recent years. As has the contribution Biophilic design has achieved in the creation of work environments that are both beneficial and restorative to their workforce.

Our physical and psychological well-being has moved center stage and within enlightened organisations the need to care for their workforce has become a central requirement in the creation of new workspaces.

Woods/planter are designed to make our workplace a more engaging, stimulating and restorative environment. They are designed to allow the originators' of workspaces to create areas that are centered in the restorative dynamics of nature. Informed by the Biophilic movement and its thesis of both the benefits of and our profound need - to be close to and surrounded by nature.

Woods/planter is a product that facilitates both the creation of a scalable natural oasis of plants that offer diverse work typologies within and around them, for both the individual and the collaborative group. Woods/planter is a simple product typology that delivers vitality and most importantly is designed with intelligence, which allows the product to be easily installed, moved, maintained and looked after.

Woods/planter creates space division using the attributes of natural wood slats structured around 'low tech' metal frames with five shelf options of plants to create a diverse typology of configurations where you are surrounded by plants and a little less people.

Top – WOODS02, **Bottom** – WOODS01 and WOODS04

Product Range

WOODS01
Low Planter

H1450 [H57]

Self Watering System

Lechuza self-watering planters

As standard, Woods can be specified with either 6 or 12 integrated Lechuza planters. The Lechuza self-watering planters intelligently manage water delivery to your botanicals over a 12-week period via a water reservoir supply. Regular planters can also be specified for faux botanicals.

Shelf Options

Drop in Shelf

Drop in Shelf enables customer to populate the system with their own plants in their own pots. Open aspect to pots.
